

# UI/UX Design Specification: Symptom Checker Web Application

**Project Goal:** To create the “best” user interface and experience for a symptom-checking platform, focusing on trust, clarity, and ease of use.

## 1. Design Philosophy: “Empathetic Clarity”

The design should not feel like a cold medical tool. Instead, it should feel like a **supportive health companion**.

- Trust:** Professional typography and a clean, clinical (but not sterile) layout.
- Calm:** Soft colors and smooth transitions to reduce user anxiety.
- Efficiency:** Minimal steps to reach a result, with intelligent defaults.

## 2. Visual Identity & Design System

### 2.1 Color Palette

| Category  | Color Name     | Hex Code | Purpose                                         |
|-----------|----------------|----------|-------------------------------------------------|
| Primary   | Healing Teal   | #007B8F  | Brand identity, primary buttons, active states. |
| Secondary | Serene Blue    | #E1F5FE  | Background highlights, card backgrounds.        |
| Accent    | Vitality Green | #4CAF50  | Success states, “Low Urgency” indicators.       |
| Warning   | Caution Amber  | #FF9800  | “Medium Urgency” indicators.                    |
| Alert     | Emergency Red  | #D32F2F  | “High Urgency” indicators, critical alerts.     |
| Neutral   | Soft Gray      | #F5F7FA  | App background, subtle borders.                 |

## 2.2 Typography

- **Headings:** *Montserrat* (Bold/Semi-Bold) - Modern, clean, and authoritative.
- **Body Text:** *Inter* (Regular/Medium) - Optimized for screen readability and accessibility.
- **Scale:**
  - H1: 32px (Page Titles)
  - H2: 24px (Section Headers)
  - Body: 16px (Standard Text)
  - Small: 14px (Captions, Disclaimers)

## 2.3 UI Components

- **Buttons:** Rounded corners (8px radius) for a friendly feel. High-contrast primary buttons with subtle hover shadows.
  - **Input Fields:** Large, easy-to-tap areas with clear focus states and descriptive placeholders.
  - **Cards:** Minimalist white cards with soft shadows ( 0px 4px 12px rgba(0, 0, 0, 0.05) ) to create depth.
- 

# 3. Core Interaction Patterns

---

## 3.1 The “Symptom Journey” (Step-by-Step Flow)

1. **Welcome & Consent:** A beautiful hero section with a “Start Checking” button. Mandatory medical disclaimer modal with a clear “I Agree” action.
2. **Visual Selection (The Body Map):**
  - An interactive, stylized 2D human silhouette.
  - Users click a region (e.g., Head, Chest) to filter relevant symptoms.
  - *Interaction:* Smooth zoom-in effect on the selected region.
3. **Smart Search & Multi-Select:**
  - Search bar with “fuzzy matching” (e.g., typing “ack” suggests “Back pain”).

- Selected symptoms appear as “pills” that can be easily removed.

#### 4. Contextual Questions:

- One question per screen to avoid overwhelming the user.
- Large, selectable cards for answers (e.g., “How severe is the pain?” -> [Mild] [Moderate] [Severe]).

#### 5. Result Visualization:

- A prioritized list of results.
  - “Urgency Meter” showing a visual scale from “Home Care” to “Emergency”.
- 

## 4. Accessibility & Inclusivity (WCAG 2.1 AA)

---

- **Contrast:** All text-to-background ratios will exceed 4.5:1.
  - **Screen Readers:** Semantic HTML and ARIA labels for all interactive elements.
  - **Touch Targets:** Minimum 44x44px for all clickable elements to support users with limited dexterity.
  - **Language:** Simple, non-jargon language (Grade 6 reading level).
- 

## 5. Micro-interactions & Motion

---

- **Progress Indicator:** A thin, animated bar at the top to show journey progress.
  - **Loading State:** A calming pulse animation (instead of a spinning wheel) while the AI analyzes symptoms.
  - **Transitions:** Gentle “fade and slide” transitions between screens to maintain context.
- 

## 6. High-Fidelity Mockup Concepts

---

- **Screen 1: Landing Page** - Minimalist, centered search, “Most Common Symptoms” quick-links.

- **Screen 2: Body Map** - Light blue silhouette on a white background, interactive glowing “hotspots”.
- **Screen 3: Results Dashboard** - Large urgency indicator at the top, clear “What to do next” section.
